Neat Application

HotBox - 1.0

make anything full screen

Product Description:

HotBox is a background application that allows you to make anything on screen become full screen. Just press a hot key, drag a box around some portion of the screen, and it'll zoom in on what you selected so that it completely fills your monitor. It works great with internet videos, flash movies, photos, or anything else you want to see big!

FYI:

Q: I'm moving from the Gulf (which uses 220 Volt) to take up residence in Japan (which uses 100 Volt electricity). Can you tell me if my iMac, purchased in the UAE, is dual-voltage and can be used in a 100-volt electrical environment like Japan's?

**A: You can check out detailed specs of your particular computer using the Apple Specs Database - <http://www.info.apple.com/support/applespec.html> . Enter the serial number of your computer into the field box indicated on this web page; Locate this serial No. by clicking Apple Menu > About this Mac > More Info. Electrical specifications will be displayed, along with other detailed info. about your particular model. Don't you just love Apple support?
(Credit to Brian Nielsen for helping out with this answer**
